

Noah Hoffman CS 202 Project 8 documentation sheet

Purpose:

The purpose of this program is to create two implementations of the queue ADT, implemented as both an Array queue and a Linked List queue.

Design:

The design of this project was similar to project 8. Had a ArrayQueue, datatype, and nodeQueue files to work with.

Problems:

I had a lot of problems throughout this project and cannot even say I fixed every single one but I am getting used to writing code to a specific problem though, this project was very interesting

Changes:

I spent a good amount of time on this project and yet i am left with wanting more time to work on it and make it better. With given more time I would like to do this project dynamically to practice the use of new. I would also try this as a 2d array, but that's more of a data structures class concept
